

# Project Report: Computer Science Portfolio

Efe Yalın Güleş

June 25, 2026

## 1 Introduction

This report documents the design, implementation, and structure of my CV, created as part of the assessment task. The goal of the portfolio is to present myself as an applicant for a working student position and to showcase my technical skills, projects, and experience.

The portfolio is hosted using GitHub Pages and is publicly accessible at:

- Portfolio Website: <https://theblue0n3.github.io/Efe-Yalin-Gulec-CV/>
- GitHub Repository: <https://github.com/TheBlue0n3/Efe-Yalin-Gulec-CV>

This report explains the structure of the website and repository, the design decisions behind the portfolio, the tools used to build it, and reflections on its strengths, weaknesses, and things i could do better later on.

## 2 Portfolio Structure

The portfolio consists of a single-page website built using HTML and CSS. The structure is intentionally minimal to ensure clarity, readability, and ease of navigation. The main sections of the website are:

- **About Me** – A short introduction describing my background and interests.
- **Skills** – A summary of the programming languages and tools I am familiar with.
- **Projects** – Links to selected GitHub repositories showcasing my work.
- **CV** – A downloadable PDF version of my curriculum vitae.
- **Contact** – Links and information for reaching me.

The website uses a dark-mode, for the better of everybody's eye health. Make sure you use yellow light when your enviornment is dark everyone.

### 3 Repository Structure

The GitHub repository contains all files required for the portfolio website and supporting materials. The structure is as follows:

- `index.html` – The main webpage.
- `README.md` – Documentation describing the repository.
- `Efe_Yalin_Gulec_Resume.pdf` – My LaTeX-generated CV and everything else related to it.

Larger projects are not duplicated inside this repository; instead, they are linked directly to their respective GitHub repositories. Neat.

### 4 Design Decisions

Several design choices were made to ensure the portfolio is both functional and visually appealing:

- **Dark Mode:** Chosen for readability, modern aesthetics, and reduced eye strain.
- **Minimal Layout:** A simple structure helps hiring managers quickly find relevant information.
- **HTML + CSS Only:** Keeping the site lightweight ensures fast loading and easy maintenance.
- **GitHub Pages Hosting:** Provides free, reliable hosting directly integrated with version control.
- **Project Linking:** Instead of embedding full projects, links to GitHub repositories maintain clarity and avoid clutter.

Everything that a professional and nice looking CV needs.

### 5 Tools and Technologies Used

The following tools and technologies were used to develop the portfolio:

- **HTML/CSS** – For building and styling the webpage.
- **Git and GitHub** – For version control, hosting, and project management.
- **GitHub Pages** – For deploying the portfolio website.

- **LaTeX** – For creating both this report and my CV.
- **VS Code / Overleaf** – For editing code and LaTeX documents.

These tools were selected because they are widely used in industry and what my colleagues largely recommended to me.

## 6 Reflection

### Strengths

The portfolio has several strengths:

- Clean and modern design.
- Easy-to-navigate structure.
- Clear presentation of skills and projects.
- Professional use of GitHub Pages and version control.
- Lightweight and fast-loading.
- Allows me to more easily get employed

### Weaknesses

There are also areas that could be improved:

- Limited visual elements and interactivity.
- No responsive design for mobile devices.
- No navigation bar for quick section access.
- Can't bake you a cake, I tried.

### Future Improvements

To further enhance the portfolio, I plan to:

- Add responsive design for better mobile usability.
- Implement a navigation bar for smoother navigation.
- Include more detailed project descriptions and visuals.

## 7 Conclusion

This portfolio demonstrates my technical skills, projects, and ability to design and deploy a functional website using industry-standard tools. The process of building the portfolio and writing this report has strengthened my understanding of web development, and documentation.
